

NRUSINHA PADHI

Java Backend Developer | Spring Boot | Microservices | ReactJS

Email: nrusinhapadhi25@gmail.com | Phone: 9827339110 | LinkedIn: linkedin.com/in/nrusinha-padhi

PROFESSIONAL SUMMARY

Java Backend Developer with 1.8 years of hands-on experience in designing, developing, and supporting scalable enterprise applications using Java, Spring Boot, Microservices, JMS, ActiveMQ, MySQL, and ReactJS. Experienced in building secure REST APIs, implementing asynchronous communication, managing CI/CD pipelines, and supporting production environments. Strong understanding of Spring Data JPA, Spring Batch, Spring Integration, JWT authentication, GitHub Actions, JUnit, Mockito, ServiceNow, and Agile delivery practices.

TECHNICAL SKILLS

Programming Languages: Java, Python

Java Backend: Spring Boot, Spring Data JPA, Spring Integration, Spring Batch, Spring JMS, REST APIs, Junit, Mockito

Frontend Technologies: ReactJS, JavaScript, HTML, CSS

Microservices: Spring Boot Microservices, Eureka Service Discovery, Config Server, API Gateway, JWT Authentication

Messaging & Integration: JMS, ActiveMQ, SFTP, Event-Driven Architecture

Databases & Tools: SQL, GitHub Actions, Maven, Gradle, Git, CI/CD, MySQL, Eclipse, VS Code

PROFESSIONAL EXPERIENCE

Cognizant | Programmer Analyst | September 2024 – Present

- Developed and enhanced backend services using Java, Spring Boot, and Spring Data JPA, supporting scalable enterprise application workflows.
- Built and maintained frontend UI components using ReactJS, JavaScript, HTML, and CSS to support end-to-end application functionality.
- Implemented asynchronous and event-driven communication using Spring Integration, Spring JMS, JMS queues, and ActiveMQ, improving service decoupling and message reliability.
- Contributed to microservices-based architecture using Eureka Service Discovery, Config Server, API Gateway, and JWT-based authentication for secure distributed service communication.
- Developed and managed batch processing solutions using Spring Batch, including SFTP file handling, scheduled jobs, and Control-M-based job execution.
- Performed database operations using Spring Data JPA and MySQL, including entity mapping, repository development, query handling, and schema migration support.
- Maintained and enhanced CI/CD pipelines using GitHub Actions, reducing manual deployment effort and improving release reliability across UAT and Production environments.
- Investigated, analyzed, and resolved production incidents using ServiceNow, ensuring application stability and timely issue resolution.
- Executed JDK and Tomcat upgrade activities, supporting application modernization, compatibility, and platform stability.
- Wrote unit test cases using JUnit and Mockito to improve code quality, maintainability, and test coverage.
- Collaborated with QA teams during Smoke Testing, Load Testing, and Regression Testing to ensure smooth production releases.

PROJECTS

Stock Market Platform

Technology Stack: Java, Spring Boot, Microservices, ReactJS, MySQL, REST APIs, JWT Authentication

- Designed and developed an end-to-end stock trading web application with secure user authentication and personalized dashboards.
- Implemented core trading features, including stock buy/sell transactions, holdings management, and user portfolio tracking.
- Developed scalable backend services using Spring Boot Microservices and exposed REST APIs for frontend integration.
- Built interactive frontend screens using ReactJS, enabling users to view stock details, holdings, and transaction activity.
- Used MySQL for transactional data storage, user records, stock holdings, and trade history.

Employee Management System

Technology Stack: Java, Spring Boot, Spring Data JPA, Spring JMS, ActiveMQ, MySQL, XML, XSD, JSON

- Built a Spring Boot-based REST application to manage employee records with complete CRUD operations.
- Designed APIs to accept XML requests, validate them against XSD schemas, and return structured JSON responses.
- Used Spring Data JPA to perform database operations and manage employee records in MySQL.
- Implemented event publishing using Spring JMS and ActiveMQ whenever employee records were created, updated, or deleted.
- Developed a separate JMS listener to consume audit events asynchronously and store audit details in a dedicated database.
- Improved auditability, traceability, and service-level separation by implementing asynchronous event-driven processing.

EDUCATION

Bachelor of Technology | C. V. Raman Global University | 2020 – 2024 | CGPA: 8.5
